

Nouns-based Body paragraphs:

From the **Adj** standpoint, **Plural Noun** are bound up inextricably with **Singular Noun**, which indicates they lead to both **X** and **X**. As a well-known example, a longitudinal study conducted by eminent scientists in 2014 demonstrates the relationship between **X** and **X** as well as an exponential increase in **X**. **Their academic criticism was impressive. Researchers, nevertheless, paid heed to X, X, and X alike.** Consequently, my empirical evidence presented thus far supports the contention that the likelihood of **X** is correlated positively with not only **X** but also **X**.

Adj → {social, cultural, psychological, technological, traditional, political, economical, environmental, technical, legal}

Within the realm of **X**, without the slightest doubt, **Plural Noun** attribute to **X**, in that it would come down to **X**, **X**, and **X**. A salient example of such attribution is **X**, which is a cause for concern since it was mistaken to take **X** for granted. Had there been a paradigm shift earlier, scholars might have had the opportunity to pinpoint **X** problems. **Likewise, hardly had they confined their attention to X, X, and even X. Besides, this criterion is an indispensable part of modern lifestyle.** Hence, it is reasonable to infer the pivotal role of **X**.
